

# Blocks and Recipes

Einführung von eigenen Blocks

Einführung von Rezepten

# Ein erster eigener Block

- Neues Paket **block**, darin neue Klasse **ModBlocks**
  - Block anlegen
  - Block registrieren
  - Registrierung einbinden

# Block anlegen

- Was sind Identifier
  - Eindeutig definierte Objekte in Minecraft
  - Gibts immer nur einmal
- BlockSettings – definieren Block-Eigenschaften
- In `de.jottyan.gta.gdp.block.ModBlocks`

```
public static final Block RUBY_BLOCK = registerBlock(  
    Identifier.of(GTAGDP.MOD_ID, "ruby_block"),  
    AbstractBlock.Settings.create().strength(4f)  
        .requiresTool().sounds(BlockSoundGroup.AMETHYST_BLOCK));
```

# Block und Blockitem registrieren

- Blocks und BlockItems
  - Einen Block ohne BlockItem kann man nicht verwenden
- In `de.jottyan.gta.gdp.block.ModBlocks`

```
private static Block registerBlock(Identifier identifier, Block.Settings settings) {
    Block block = new Block(settings.registryKey(RegistryKey.of(RegistryKeys.BLOCK, identifier)));
    registerBlockItem(identifier, block, new Item.Settings());
    return Registry.register(Registries.BLOCK, identifier, block);
}

private static void registerBlockItem(Identifier identifier, Block block, Item.Settings settings) {
    Registry.register(Registries.ITEM, identifier, new BlockItem(block,
        settings.useItemPrefixedTranslationKey().registryKey(RegistryKey.of(RegistryKeys.ITEM, identifier))));
}
```

# Registrierung einbinden

- In de.jottyfan.gta.gdp.block.ModBlocks

```
public static void registerModBlocks() {  
    GTAGDP.LOGGER.info("Registering Mod Blocks for {}",  
        GTAGDP.MOD_ID);  
  
    ItemGroupEvents  
        .modifyEntriesEvent(ItemGroups.BUILDING_BLOCKS)  
        .register(entries -> { entries.add(RUBY_BLOCK); });  
}
```

# In GTAGDP.onInitialize()

```
public class GTAGDP implements ModInitializer {  
    public static final String MOD_ID = "gtagdp";  
    public static final Logger LOGGER = LoggerFactory.getLogger(MOD_ID);  
  
    @Override  
    public void onInitialize() {  
        ModItems.registerModItems();  
        ModBlocks.registerModBlocks();  
    }  
}
```

# JSON-Dateien und Bilder

- Blockstates
  - Aktueller Anzeigezustand eines Blocks
- Items
  - Damit Blöcke in der Hand sichtbar werden
- Übersetzung
- Models
  - Damit Blöcke in der Welt sichtbar werden
- Texturen
  - Damit Blöcke schick aussehen

# Blockstates

- In assets.gtagdp.**blockstates**
  - Neue JSON-Datei **ruby\_block**.json

```
{
  "variants": {
    "": {
      "model": "gtagdp:block/ruby_block"
    }
  }
}
```

# Items

- In `assets.gtagdp.items`
  - Neue JSON-Datei `ruby_block.json`

```
{  
  "model": {  
    "type": "minecraft:model",  
    "model": "gtagdp:block/ruby_block"  
  }  
}
```

# Models (Blocks)

- In `assets.gtagdp.models.block`
  - Neue JSON-Datei `ruby_block.json`

```
{  
  "parent": "minecraft:block/cube_all",  
  "textures": {  
    "all": "gtagdp:block/ruby_block"  
  }  
}
```

# Models (Items)

- In `assets.gtagdp.models.item`
  - Neue JSON-Datei `ruby_block.json`

```
{  
  "parent": "gtagdp:block/ruby_block"  
}
```

# Übersetzungen

```
{  
  "item.gtagdp.stub": "Stummel",  
  "item.gtagdp.rubyball": "Rubinball",  
  "block.gtagdp.ruby_block": "Rubinblock"  
}
```

```
{  
  "item.gtagdp.stub": "Stub",  
  "item.gtagdp.rubyball": "Ruby ball",  
  "block.gtagdp.ruby_block": "Ruby block"  
}
```

# Textur anlegen

- `assets/gtagdp/textures/block/ruby_block.png`

# Erstelle einen 2. Block und binde ihn ein

- Git commit und push – erst dann mit neuen Features starten
- Namen überlegen (z.B. ruby\_ore)
- Block-Bild malen
- In ModBlocks einbetten
- Testen
- Git commit und push

# Rezepte

- Umwandeln von Objekten
  - Lagerfeuer
  - Werkbank
  - Ofen
  - Block drop
  - Loot Tables
- <https://crafting.thedestruc7i0n.ca/>

# Fackeln vom Stummel am Lagerfeuer

- In src/main/resources/data/gtagdp/recipe/campfire\_torch\_from\_stub.json

```
{  
  "type": "minecraft:campfire_cooking",  
  "ingredient": "gtagdp:stub",  
  "result": {  
    "id": "minecraft:torch"  
  },  
  "experience": 0.1,  
  "cookingtime": 20  
}
```

# Werkbank: rubyball ↔ ruby block

```
{  
  "type": "minecraft:crafting_shaped",  
  "pattern": [  
    "###",  
    "###",  
    "###"  
  ],  
  "key": {  
    "#": "gtagdp:rubyball"  
  },  
  "result": {  
    "id": "gtagdp:ruby_block",  
    "count": 1  
  }  
}
```

```
{  
  "type": "minecraft:crafting_shapeless",  
  "ingredients": [  
    "gtagdp:ruby_block"  
  ],  
  "result": {  
    "id": "gtagdp:rubyball",  
    "count": 9  
  }  
}
```

## Schmelzofen: rubyball aus ruby\_ore

```
{  
  "type": "minecraft:blasting",  
  "ingredient": "gtagdpruby_ore",  
  "result": {  
    "id": "gtagdprubyball"  
  },  
  "experience": 0.1,  
  "cookingtime": 200  
}
```

# Loottables

- Registrieren von Blöcken, die Werkzeuge brauchen
- Werkzeugauswahl festlegen
- Drop von bestimmtem Block festlegen

# Blockabbau auf Werkzeuge einschränken

```
▼ [?] > data
  ► [?] > gtagdp
  ▼ [?] > minecraft.tags.block
    ▼ [?] > mineable
      { } pickaxe.json
      { } need_iron_tool.json
```

```
{
  "replace": false,
  "values": [
    "gtagdp:ruby_block",
    "gtagdp:ruby_ore"
  ]
}
```

# ruby\_ore soll rubyball droppen

```
▼ [?] > data
  ▼ [?] > gtagdp
    ▼ [?] > loot_table.blocks
      { [?] } ruby_ore.json
```
